

M & S AUTOMATED FEEDING SYSTEMS, INC.

SALES AND SERVICE ▯ VIBRATORY AND CENTRIFUGAL FEEDER BOWLS AND EQUIPMENT

We at **M & S Automated Feeding Systems, Inc.** have been designing, fabricating and servicing stainless steel pharmaceutical bottle-feeding systems for several years now. We also have kept very busy building and improving these feeders over time for our established customers. As a matter of fact, M & S has become very proficient at these styles of feeders and have decided to market them to potential customers such as you.

Our bottle unscramblers (bottle feeders) are of centrifugal design with machined scallops in the rim. Our standard bottle feeder is USDA approved and is the only centrifugal listed as USDA approved in the USA. Sizes range from 18" to 54" diameter and we have fed bottles from 1ml to 1.5 qt at rates up to 785 bottles per minute. M & S can provide the feeder bowls, hoppers, conveyors and control panels for a turnkey feeding system to our customers.

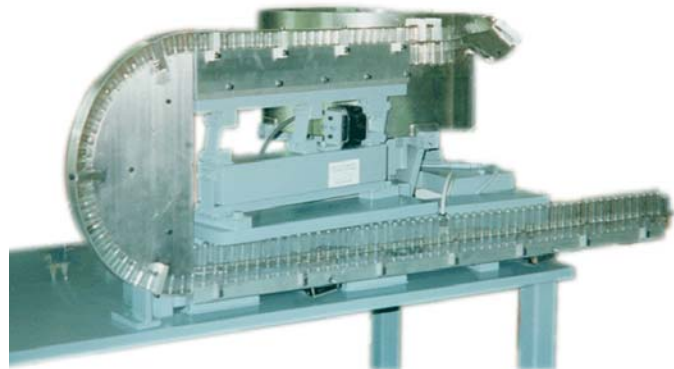

All of our feeders are on CAD in either .DWG or .DXF format and can be emailed or sent on disc to our customers for use in their layouts. We can also provide a custom drawing if a specialty piece of equipment is required or send us your drawings and we can build one to suit your needs.

Our intention is to get our name and our specific service to more potential customers. We do have sales reps, however, most of our sales have simply come by a good word of mouth from customers, our office staff or myself. Please remember this is not the only type of feeding system that we construct, so if you have any type of feeding need, do not hesitate to get in touch. If you are interested in a quick quote, contact us by phone or check us out at www.msautomated.com. We have literature and videos available and would love to help you out with your feeding needs!

Sincerely,

Mark L. Grinager

President
